

yLearn homework using yTeach activities

One Year 7 pupil's view

yLearn is a good way of doing homework. You can see what's happening, for example when you are doing particles you can see them on the screen. You can also see plant and animal cells the further you go into the cell.

I think that the explanations are good as you can understand them rather than having to ask what they mean. Also the activities help you to learn about them and why they are like that, so you can easily work it out for yourself.

Furthermore, I liked the little animations at the end of each activity as they show a humorous side to the subject.

(At Trinity School we always look for ways to improve our work.)

Some improvements could be a children's description or explanation so other children will understand something in their own way of speaking; a brighter more cheerful page little page to attract more children to work on it.
